Corridor Project

# Permaculture

\* No one definition of Permaculture

“A design method to create ecologically regenerative and socially just human systems that are mutually beneficial to earthlings and the ecosystems based in values of ecological justice and equity.”

# Phases of the Permaculture Process

1. OBSERVE
2. VISION
3. DESIGN
4. IMPLEMENT

# Key Principles for Site Assessment/Observation Phase

- Protracted and Thoughtful Observations (PATO)
- Compose With, Rather than Impose Upon
- Work from Patterns to Details

# Site assessing 101

Asks:

- What do we have?
- What is the state of the situation we will be working in?

# Site Assessing - Sectors

## SECTORS

Natural energies that come into your site that you cannot control but you can open to, channel, or block.

**Sun**

**Water**

**Wind**

**Wildfire**

**Frost**

**Noise**

**Pollution**

**Entrances**

**Views**

**Wildlife**

# Site assessing - Zones

Frequency and intensity of human use

Zone 1 - multiple visits per day

Zone 2 - one to two visits per day

Zone 3 - one to two visits per week

Zone 4 - one to two visits per month

Zone 5 - irregular visits

# Topography

## Why you need to know about the topography on your site:

1. Will inform you about how water flows through the space
2. Could indicate erosion potential
3. Informs decisions during installation
  - a. Swales, Rain gardens, structures, rain tanks,

# Soil Type

How water moves through soil

Types of loam  
 $\leq 2.5$  cm ribbon

Types of clay loam  
 2.5 - 5 cm ribbon

Types of clay  
 $\geq 5$  cm ribbon

# Other observations and considerations

- Existing features
  - Storm drains
  - Down sprouts
  - Hardscape
  - French drain
  - Trees
- Occupancy
- Water Bill Metrics
- Utilities
  - Laundry location
  - Wells
  - Septics

# Activity/Practice Time at Brenda's

# Problems, desires, purpose and values

- **What are your goals for your site? What is your vision for the space in 5 year?**
- **Which benefits do you value most?**
  - Conserve water
  - Mitigate flooding
  - Create shade
  - Pollinator habitat
  - Water Quality
  - Recreation
  - Food production
  - Fire resilience
  - Soil health
  - Curb appeal/beauty

# NEXT STEP > Vision

## Legend

- Property Line
- (E) Structures
- (E) Downspouts
- (E) Fence
- (E) Trees
- Non-Permeable Pathway
- Rainwater Catchment & Overflow
- Rainwater Catchment Area
- Sheet Mulch and Climate Appropriate / Pollinator Plantings
- Rain Garden
- Greywater Reuse
- Irrigation Retrofit
- Shade Tree
- Fruit Tree
- Shrub
